

Mikhail Talalaev

Software Engineer — Full Stack (TypeScript / React / Node.js / LLM)

talalaev.misha@gmail.com | LinkedIn | GitHub | aifirst.us.com | Moscow, Russia · open to relocation to Dubai

Summary

Full-stack engineer with 4+ years of production experience in TypeScript, React/Next.js and Node.js. At Yandex I lead the frontend of a high-load workflow-automation platform for customer communications and ship features end to end: UI, API layers, LLM integrations, releases and production support. Outside work I build and operate consumer-facing LLM products (autonomous news agent, Telegram assistants, an AI blog) on a Node/Next.js/PostgreSQL stack, taking ownership of latency, reliability and LLM cost. I write about AI-first engineering at aifirst.us.com.

Work Experience

Yandex (Yandex Go) — Communication Platform

Apr 2025 – present

Software Engineer, frontend lead of the workflow-automation platform

Moscow

- Own the frontend of a low-code workflow engine (Temporal-based, n8n-like) that runs millions of customer-communication scenarios daily (React, TypeScript, micro-frontends); ship a production release roughly every week and support it in production
- Built LLM features in the workflow editor: an “AI agent” step that calls an LLM with a system prompt and tool calling, and prompt-based generation of whole workflows, taken from an internal hackathon idea to production
- Integrated a shared Email service via Module Federation and moved event-filter configuration into the platform, enabling new communication launches with measurable revenue impact
- Designed and delivered role-based access control: permission model agreed with backend, API layer, action gating, 403 handling and access sharing for workflows, bots and templates, closing a security requirement
- Delivered workflow versioning and rollback, new channels (Telegram, Viber, WhatsApp, Webhook, Push) and template management with its API layer
- Embedded a partner team’s AI-agent admin UI into the platform as an iframe module (9 sections, two repos, three weeks) and demoed it to the org
- Set up RUM observability and alert thresholds; review ~50 PRs per half-year, decompose and assign work to 3 developers; drove team AI adoption (agent rules, shared review skills) and taught internal AI-coding sprints

aifirst.us.com — personal LLM products (side projects, in production)

2025 – present

Founder / Full-stack engineer

- AI news journal (Next.js, React, Node.js, PostgreSQL): feed, search and editorial CMS; ISR caching for fast page loads, JWT auth, unit and e2e tests, self-hosted deployment
- Autonomous news agent (Node.js): collects sources, ranks and summarises with LLMs via multi-provider routing (Claude, OpenAI, local models) to balance quality and cost; human approval in Telegram, then publishes to blog and channel
- Telegram assistant for AR glasses: photo or voice is turned by an LLM into a food-diary entry in a third-party API (OAuth, retry queue); open-source macOS menu-bar app for Claude Code

STOMPLAN

May 2024 – Apr 2025

Frontend Developer (Angular, TypeScript)

Moscow

- Built a dental treatment-planning service and an interactive patient-presentation builder with PDF export; took the product from zero to MVP launch
- Led the migration to modern Angular; designed the navigation architecture and interactive content blocks

ShurikMarket (e-commerce)

Nov 2022 – May 2024

Full-stack Developer (React, Next.js, PHP/Symfony)

St. Petersburg

- Maintained a Symfony monolith and prepared its migration to a REST API; implemented user registration and authentication
- Cut initial page load time, built an internal UI kit, shipped news, certificates, feedback and favourites services

QCup (loyalty platform)

Nov 2021 – Dec 2022

Frontend Developer (React, TypeScript, Redux)

- Designed the application architecture from scratch (UI / BLL / DAL layers), REST client-server integration, async state and error handling

Earlier: Yandex userver (open-source C++ framework) — documentation UI, May–Oct 2023 · Gazprom, IT systems implementation specialist, 2016–2022.

Education

Yandex School of Interface Development — Frontend Developer, certificate

2023

Tyumen State Oil and Gas University — Engineer’s degree, Chemical Technology

2011

Skills

Core stack (daily, production): TypeScript, React 19, Next.js 15, Node.js (Express, Next.js API routes), REST API design, PostgreSQL, TanStack Query, Ant Design / MUI

AI / LLM engineering: Anthropic and OpenAI APIs, tool calling (function calling), streaming, agent loops, MCP servers, prompt evals, multi-provider routing incl. local models; AI-first workflow with Claude Code and Cursor

Architecture & quality: micro-frontends (Module Federation), RBAC and JWT/OAuth auth, caching (ISR, TanStack Query), unit/integration/e2e testing (Jest, Vitest, Playwright), observability (RUM, alerting)

Delivery & infra: CI/CD (GitHub Actions), Docker, nginx, deployment and release management, on-call/duty rotation

Also worked with: Angular, Redux, Symfony/PHP, SQLite, Redis, Tailwind

Languages: English (B2), Russian (native)
